EDUCATION

B.Sc. in Software Engineering
CATHOLIC UNIVERSITY INSTITUTE OF BUEA

08/2016 - 12/2020

PROFESSIONAL EXPERIENCE

Backend Software Developer
Panafrican pacific holdings sarl(PPH Sarl)

10/2020 - Present

PPH is a company specialized in the design and deployment of innovative solutions for the management and security of IT systems

Achievements

- Building an excel reader with the xlrd python module, which allows to extract data directly from an excel file.
- Using Flask_Swagger, we build APIs to allow direct communication between our API and our front-end.
- Using Docker, I host applications to allow for quick testing and allow me to go back and deploy applications more quickly.
- With the use of data structures such as list,dictionaries and queues,we were able to come up with a billing process for one of our clients enabling him to pay his clients and workers

Accomplished projects : https://bo.amexpert.pro:4443/

Backend and Frontend Developer
Odaaay

01/2017 - 12/2019

odaaay is a start up specialized in the creation of trendy applications, such as video games or social networking applications.

Achievements

- Using an sql database, I designed the database for a news site that allows users to get the latest news from around the world.
- I was in charge of integrating the Stripe payment API to the Flask_stripe module, which allows to pay online by credit card.
- In addition, by using the Google translate api and redis, I was able to create background tasks to translate the newsfeeds into different languages and stores to allow different types of users to visit the site.
- Regarding the front-end, I was part of the javascript team with the view framework to make api calls from the back-end we built using python flask and in parallel beautify the front-end with html and css.
